

# EP Deer

## DATASHEET

Version: 01-10-2019

EP Deer is a complementary feed produced from corn, rapeseed meal and sugar beet molasses fermented with lactic acid bacteria. EP Deer contains fermentation metabolites including lactic acid, and contains gut flora stabilizing lactic acid bacteria. The fermentation process ensures a high digestibility of the product and makes the product very suitable for maintaining a healthy gut. Made from non-GMO raw materials.

**Direction:** Intended for use as a complementary feed with up to 20 % of the daily ration. Place it next to the row deers regular feed. The deer will self-regulate their feed intake.

**Better gut health for your animals**
